- **Performance Testing:** JMeter, K6, Locust, Gatling
- **Security Testing:** Penetration Testing with Veracode
- **Test Management:** TestRail
- **Version Control, Configuration:** GitHub, WagTail
- **CI/CD Integration:** Jenkins, GitHub Actions

Introduction

Digit88 specialise in providing QA as a service for small to large enterprises. Digit88's QA services range from taking end-end QA ownership, automation services, manual QA, setting-up a QA team with qualified and certified engineers as an extension of customer's team.

We bring domain experience across different industries such as **Healthcare, Energy, Conversational AI, Cloud Infrastructure, Analytics, AI/ML,** and **Product Life Cycle Management** catering to compliance needs, domain specific testing, accessibility standards, security, device-specific testing etc. With over 8+ years of services experience Digit88 can help enterprises reduce Go-To-Market time by speeding up QA cycles through automation, CI/CD and build automation, optimizing development to production pipelines, QA metrics and dashboards, and specific framework development.

Our Service Offerings

- **Cloud QA Services:** AWS, Azure, GCP
- **End-To-End Managed QA Services:** planning, tools and technologies selection, execution, metrics, test case documentation, environment management, Configuration management, automation, and maintenance
- **Automation:** Framework development for functional, performance, load testing, for web and mobile apps
- **Manual QA:** Dedicated skilled QA engineers
- **Backend QA Services:** API, DB testing
- Performance, security, accessibility, load, usability testing
- **Compliance testing:** HIPAA, GDPR, WCAG, ADA, UI/UX standards etc.
- Dedicated QA team as extension to customer teams
